

IRAY-AC37
18650 BATTERY EXTENDER
FOR BOLT SERIES

The IRAY-AC37 BOLT Series Battery Extender allows for the use of an 18650 battery with the BOLT Series rifle scope, which extends battery life by more than 75%. The IRAY-AC37 is compatible with BOLT TL35, TL35V2, TH35C, TH50C, TH50CV2, and TD50L models (not compatible with BOLT SE Series models).

To install the IRAY-AC37 and an 18650 battery:

- Remove the original battery compartment cover.
- Screw the IRAY-AC37 BOLT Series Battery Extender onto the battery compartment threads. Do not overtighten (hand-tighten only).
- Insert an 18650 battery. The positive battery [+] terminal faces in and the negative [-] terminal faces outward.
- Thread the original battery cover onto the end of the IRAY-AC37.

NOTE: There are two types of 18650 batteries: button tops and flat tops. The AC37 is designed for use with flat-top, 65 mm long 18650 batteries only. Attempting to use the AC37 with a button top battery may damage the battery or not close/seal the battery compartment completely.
