

ULTIMATE NIGHT VISION

# ULTIMATE HELMET MOUNT

FROM ULTIMATE NIGHT VISION

## UNIVERSAL COMPATIBILITY

Designed to work with virtually any monocular or binocular configuration, this single Ultimate Helmet Mount bridge eliminates the need for flip mounts, adapters, or multiple part numbers. Order one solution and you're set no matter how your setup evolves.

## REPEATABLE, LOCKED POSITIONING

Integrated locking mechanisms and index markings ensure adjustments stay secure and can be returned to the same position every time.

## INDEPENDENT OPTIC ADJUSTMENT

Each optic can be adjusted individually for interpupillary, lateral position, and fore-aft placement, allowing precise alignment without compromise.

## THE ULTIMATE HELMET MOUNT

The bridge design supports rapid transitions between stowed and deployed positions and allows each optic to articulate independently. Whether running dual monoculars, thermal and night vision combinations, or a single optic configuration, the UNV Ultimate Helmet Mount offers a stable and configurable solution built to adapt to different mission requirements.

# INTRODUCING THE UNV ULTIMATE HELMET MOUNT

*Modular Dual-Optic Bridge System*

## MADE IN TEXAS

The UNV Ultimate Helmet Mount is a modular dual-optic bridge system designed for users running night vision, thermal, or mixed-optic helmet setups. Built for stability and repeatable alignment, it allows independent adjustment of each optic while maintaining a low-profile, helmet-ready configuration. Designed, machined, and assembled in Texas, it reflects our commitment to in-house manufacturing and real world performance.

This product is the result of more than a decade of using complicated, hard-to-find solutions for helmet-mounted thermal and night vision. We knew exactly what we wanted to improve, so we did what any user would do: we got to work. This mount represents over a year of design concepts, testing, refinement, and continuous improvement

## SPECS

**Weight:** Bridge configuration: 8.82 Oz

Bino configuration: 5.3 Oz

**Interpupillary Span:** 2.0 - 2.8"

**Height Adjustment Range (in shroud):** .835"

**Fore/Aft Adjustment Fange:** 1.3"

**Tilt Adjustment degrees:** 30

**Individual Pod Offset Range:** .4"

## FEATURED HIGHLIGHTS

- Modular dual-optic bridge system
- Independent tilt, vertical, lateral, and fore-aft adjustment
- Adjustable interpupillary distance
- Individual eye relief adjustment
- Secure locking mechanisms for repeatable setup
- Low-profile design optimized for helmet mounting
- Durable construction for demanding environments
